Guided Exercises

Part 1: Prepare a Risk Mitigation Plan

13. Make a screen capture showing the **updated inherent risk value**.

The screenshot displays the SimpleRisk Enterprise Risk Management web application. The browser address bar shows the URL `172.30.0.57/managementportal/index.php`. The page title is "Developing a Risk Mitigation Plan (3e) vWorkstation". The main content area shows a risk entry with the following details:

- Inherent Risk:** 0.4 (Low)
- Residual Risk:** 0.4 (Low)
- Subject:** Unauthorized access to computers after cracking uncomplex passwords
- ID #:** 1001
- Created:** 2026-04-10 19:44:25
- Created By:** Dquez Carr
- Status:** New

Below the risk entry, there is a section for "Classic Risk Scoring" with the following details:

- Likelihood:** [1] Remote
- Impact:** [1] Insignificant
- RISK Calculation:** $RISK = (Likelihood \times Impact) \times (10 / 25) = 0.4$

At the bottom of the page, there is a "Details" tab selected, showing the following information:

- Risk Mapping:**
- Submission Date:** 11/02/2020
- Category:**
- Site/Location:**
- Submitted By:** Admin
- Risk Source:**
- Risk Scoring:** Classic
- Method:**

33. Make a screen capture showing the **updated Residual Risk** value.

The screenshot displays the SimpleRisk Enterprise Risk Management web application. The browser window title is 'SimpleRisk: Enterprise Risk Management'. The page shows a risk mitigation plan for a risk with ID #1904, titled 'Unauthorized access to computers after cracking uncomplex passwords'. The risk is categorized as 'Medium' with an inherent risk of 6 and a residual risk of 0.3 (Low). The mitigation plan is in the 'Mitigation' tab, showing a submission date of 04/10/2026, a planned mitigation date of 04/24/2026, and a mitigation effort of 'Considerable'. The mitigation cost is '\$0 to \$100,000', the owner is 'Admin', the team is 'Information Security', and the mitigation percent is 95%. The current solution is 'Currently, there is no solution.' The security requirements are 'PCI DSS compliance requirements.' The security recommendations are 'Update information security policy Section 2.2 and change the domain-wide password policy accordingly.' The supporting documentation is 'None'. The page also includes a sidebar with navigation links and a top navigation bar with a search bar and a user profile.

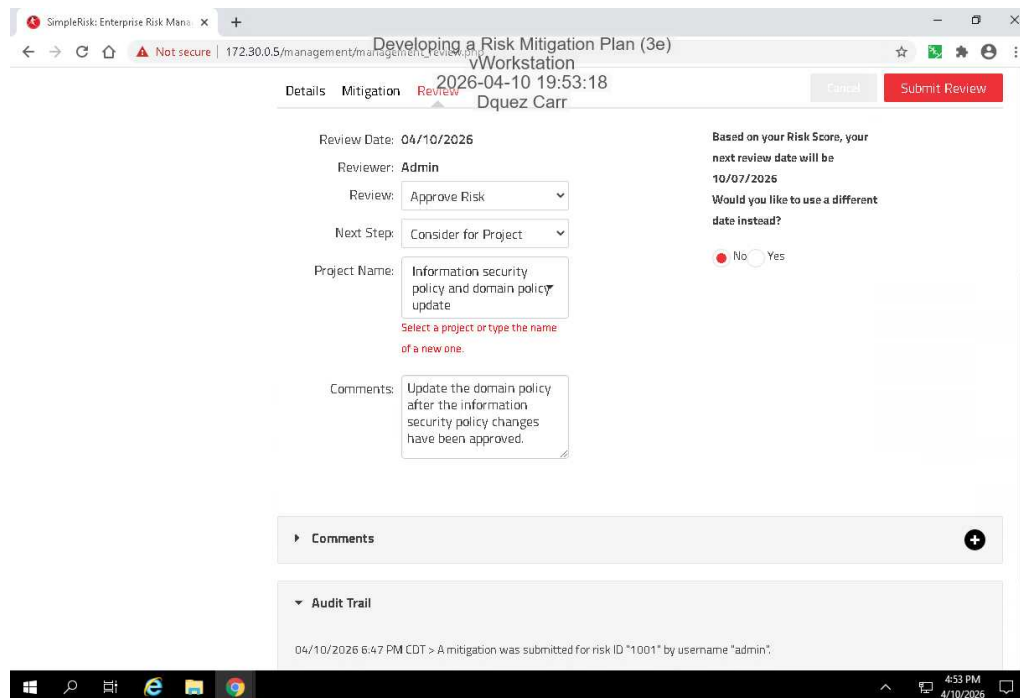

Field	Value
Inherent Risk	6 Medium
Residual Risk	0.3 Low
Subject	Unauthorized access to computers after cracking uncomplex passwords
ID #	1904
Status	New
Submission Date	04/10/2026
Planned Mitigation Date	04/24/2026
Planning Strategy	Mitigate
Mitigation Effort	Considerable
Mitigation Cost	\$0 to \$100,000
Mitigation Owner	Admin
Mitigation Team	Information Security
Mitigation Percent	95%
Current Solution	Currently, there is no solution.
Security Requirements	PCI DSS compliance requirements.
Security Recommendations	Update information security policy Section 2.2 and change the domain-wide password policy accordingly.
Supporting Documentation	None

Part 2: Conduct a Management Review

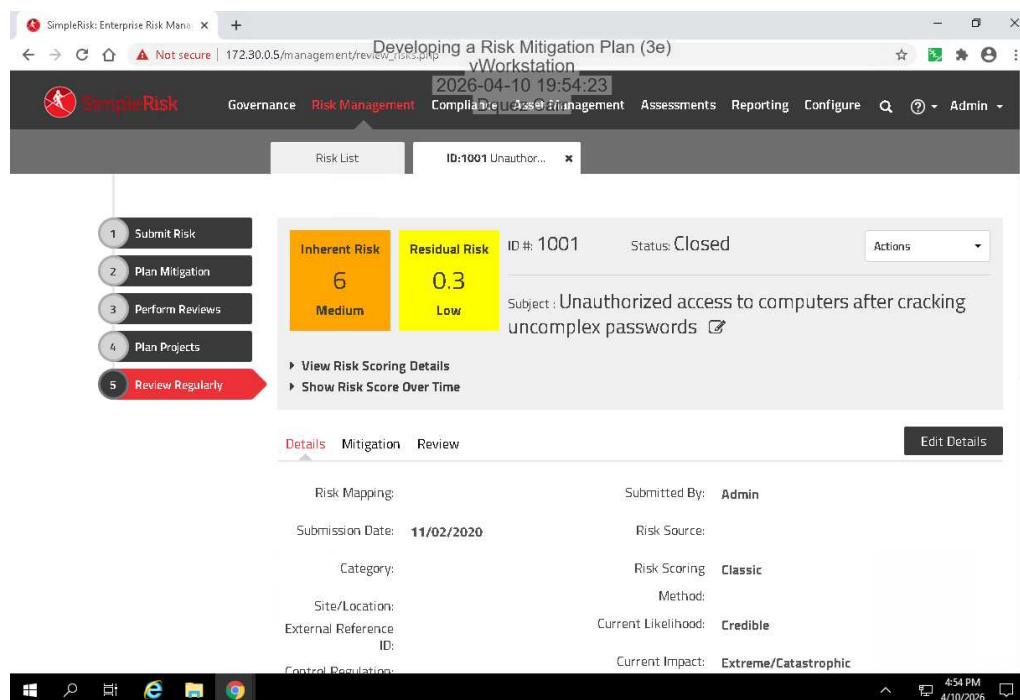

Developing a Risk Mitigation Plan (3e)

Managing Risk in Information Systems, Third Edition - Lab 07

9. Make a screen capture showing the completed Mitigation Review page.

15. Make a screen capture showing the closed risk.

Challenge Exercise

Define three security controls designed to mitigate the risk associated with a recent leak of sensitive information that was stored in cleartext files.

Security Control: Data minimization and data classification policy, Reduces: Asset values, Level: Strategic

Security Control: Encrypt sensitive files at rest and enforce secure storage standards, Reduces: Vulnerability severity, Level: Tactical

Security Control: Data loss prevention, monitoring, and incident response procedures, Reduces: Threat impact, Level: Tactical

Make a screen capture showing your **completed Risk Mitigation plan in SimpleRisk**.
