Disclaimer

The analysis, data, and reports in CSET® are provided “as is” for informational purposes only. The Cybersecurity & Infrastructure Security Agency (CISA) does not provide any warranties of any kind regarding any information contained within. In no event shall the United States Government or its contractors or subcontractors be liable for any damages, including but not limited to, direct, indirect, special, or consequential damages and including damages based on any negligence of the United States Government or its contractors or subcontractors, arising out of, resulting from, or in any way connected with this report, whether based on warranty, contract, tort, or otherwise, whether injury was sustained from, or arose out of the results of, or reliance upon the report.

CISA does not endorse any commercial product or service, including the subject of the assessment or evaluation in this report. Any reference to specific commercial products, processes, or services by trademark, manufacturer, or otherwise, does not constitute or imply its endorsement, recommendation, or favoring by CISA.

The display of the CISA official seal or other CISA visual identities on this report shall not be interpreted to provide the recipient organization authorization to use the official seal, insignia or other visual identities of CISA. The CISA seal, insignia, or other visual identities shall not be used in any manner to imply endorsement of any commercial product or activity by CISA or the United States Government. Use of the CISA seal without proper authorization violates federal law (e.g., 18 U.S.C. §§ 506, 701, 1017), and is against CISA policies governing usage of the seal.

The report is prepared and intended for internal use by the organization that made the request. The contents of this report may be subject to government or private intellectual property rights. To request distribution of this report outside the organization for which it was prepared, contact the CSET Program Office. The contents of this report may be reproduced or incorporated into other reports, but may not be modified without the prior express written permission of the CSET Program Office.

Advisory

The Cyber Security Evaluation Tool (CSET®) is only one component of the overall cybersecurity picture and should be complemented with a robust cyber security program within the organization. A self-assessment with CSET® cannot reveal all types of security weaknesses, and should not be the sole means of determining an organization's security posture.

The tool will not provide a detailed architectural analysis of the network or a detailed network hardware/software configuration review. It is not a risk analysis tool so it will not generate a complex risk assessment. CSET® is not intended as a substitute for in-depth analysis of control system vulnerabilities as performed by trained professionals. Periodic onsite reviews and inspections must still be conducted using a holistic approach including facility walk-downs, interviews, and observation and examination of facility practices. Consideration should also be given to additional steps including scanning, penetration testing, and exercises on surrogate, training, or non-production systems, or systems where failures, unexpected faults, or other unexpected results will not compromise production or safety.

CSET® assessments cannot be completed effectively by any one individual. A cross-functional team consisting of representatives from operational, maintenance, information technology, business, and security areas is essential. The representatives must be subject matter experts with significant expertise in their respective areas. No one individual has the span of responsibility or knowledge to effectively answer all the questions.

Data and reports generated by the tool should be managed securely and marked, stored, and distributed in a manner appropriate to their sensitivity.

Summary Percent Compliance

Executive Summary

Cyber terrorism is a real and growing threat. Standards and guides have been developed, vetted, and widely accepted to assist with protection from cyber attacks. The Cyber Security Evaluation Tool (CSET) includes a selectable array of these standards for a tailored assessment of cyber vulnerabilities. Once the standards were selected and the resulting question sets answered, the CSET created a compliance summary, compiled variance statistics, ranked top areas of concern, and generated security recommendations.

Network Diagram

Analysis of Network Components

Combined Component Summary

The number of identified warnings and recommendations in the basic analysis of the user-defined system diagram is 0

See the section 'Findings and Recommendations from Basic Network Analysis' for details.

Answer Distribution by Component Type

Component Compliance by Subject Area

Findings and Recommendations From Basic Network Analysis

There are no network warnings.
