Section 1: Hands-On Demonstration

Part 1: Configure the pfSense Firewall Log

13. Make a screen capture showing the system logs.

15. Make a screen capture showing the firewall logs.

The screenshot shows the pfSense web interface with the 'Status' tab selected and the 'Firewall Log' view. The table displays the last 48 log entries, showing a series of blocked traffic from 202.20.1.2 to 202.20.1.1 and 202.20.1.1 to 202.20.1.2. The traffic is blocked by the 'WAN' interface. The log entries are as follows:

Action	Time	Interface	Source	Destination	Protocol
×	Apr 13 21:54:12	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:12	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:11	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:10	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:10	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:09	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:09	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:08	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:08	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:08	WAN	202.20.1.1:40921	8.8.8.8:53	UDP
×	Apr 13 21:54:07	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:07	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:06	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:06	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:05	WAN	202.20.1.2	202.20.1.1	ICMP
×	Apr 13 21:54:05	WAN	202.20.1.1:54750	8.8.8.8:53	UDP

Part 2: Configure a Snort Intrusion Detection System

14. Make a screen capture showing the updated Pass Lists page.

28. Make a screen capture showing the active Snort status on the LAN interface.

33. Make a screen capture showing the successful ping results.

38. Make a screen capture showing the ICMP alerts in the Snort Active Log.

Part 3: Implement Firewall Log Forwarding with Kiwi Syslog Server

17. Make a screen capture showing the pfSense firewall log events in Kiwi Syslog Server.

Section 2: Applied Learning

Part 1: Configure Snort Monitoring on the DMZ

17. Make a screen capture showing the active Snort status on the DMZ interface.

20. Make a screen capture showing the **Snort GPLv2 Community Rules** enabled and "live-reloading" message.

Part 2: Implement Security Information and Event Management with Splunk

13. Make a screen capture showing the indexed events in Splunk.

Part 3: Simulate and Detect a Perimeter Network Attack

Network Security, Firewalls, and VPNs, Third Edition - Lab 06

6. **Make a screen capture** showing the **Nmap scan report**.

9. **Make a screen capture** showing the **search results in Splunk**.

Section 3: Challenge and Analysis

Part 1: Simulate a DMZ Breach with Infection Monkey

Make a screen capture showing the resulting Infection Map.

Make a screen capture showing the resulting Security Report.

Summarize your DMZ breach simulation results, highlighting what you found to be the greatest concerns from a network monitoring perspective.

The biggest concern is that Infection Monkey successfully exploited a known critical vulnerability (VSFTPD Backdoor) on IP `172.31.0.30`, confirming that the system is running a vulnerable and potentially outdated service. This poses a serious security risk, as attackers could gain unauthorized access, move laterally across the network, and compromise sensitive data. Immediate action should be taken to isolate the affected system, patch or remove the vulnerable service, and assess the environment for further exposure.

Part 2: Detect a Simulated DMZ Breach with Snort and Splunk

Make a screen capture showing the results of your search query for Infection Monkey traffic in Splunk.

Incomplete

Monitoring and Logging Network Traffic (3e)

Network Security, Firewalls, and VPNs, Third Edition - Lab 06

Describe any concerns about the structure of the query result or the data elements it contains. What data fields would you add, remove, or edit to make log analysis more effective?

Incomplete

Write a brief memo to your manager describing Splunk's usefulness in detecting traces of your simulated breach. What configuration changes would you recommend? How would you enhance its functionality?

Incomplete
